

The Emissions Control System that Pays for Itself!

TerminOx[™] converts any open-loop LPG or CNG fueled off-road engine into a state of the art, digitally programmable, closed-loop, 3-way controlled engine that simultaneously reduces CO, HC, and NOx emissions by an impressive and verified 85-90+%*. In addition, the fuel efficiency of the vehicle typically improves by as much as 20% - combine these savings and reduced building ventilation costs and the *TerminOx*[™] system can provide you a full return on investment in as little as one year.

RECEIVE 25% OFF!

If your purchase a *TerminOx*[™] kit* between June 11 and July 11, you will automatically receive 25% off! Take advantage of this amazing offer while supplies last!

*The 25% off applies **ONLY to the EMD Kit** and NOT the 3-Way Muffler.

ENGINE CONTROL SYSTEMS PRODUCT LINE

DIESEL OXIDATION CATALYSTS

AZ Purifiers and Purimufflers offer an industry leading, **verified** 20-40% PM (Particulate Matter) reduction values, dependent upon the application. They feature an advanced zeolite containing wash coat and precious metal catalysts that afford superior low temperature performance.

DIESEL PARTICULATE FILTERS

Passively Regenerating DPF

The **PURIFILTER™** was the first passively regenerating DPF to attain an industry leading 90% PM emissions reduction credit value. They are more durable as they are manufactured with Silicon Carbide substrates which offer superior filtration and durability compared to other DPF materials.

Phone: 905.707.7746

Actively Regenerating DPF

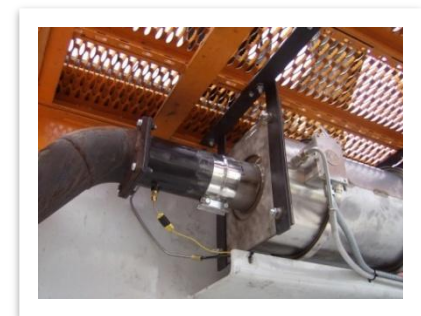

The **COMBIFILTER™** is an electrically regenerated DPF CARB verified for off-road applications. Combifilter™ offers the option of either on-vehicle or off-vehicle regeneration for 24 hour operation. Unlike passively regenerating DPF's, the Combifilter does not have to meet minimum duty cycle requirements to regenerate.

The Ultimate Solution

The best of both worlds! Combining the passive and active regeneration capabilities of our Puruifilter and Combifilter, **PURIFILTER PLUS™** is the perfect solution for fleets with widely varying duty cycles such as inter city deliver routes or school bus. While there is exhaust heat the DPF will regenerate, but give the flexibility to actively regenerate when needed.
